

Patient survey report 2017

Survey of adult inpatients 2017
Liverpool Heart and Chest Hospital NHS Foundation Trust

NHS Patient Survey Programme

Survey of adult inpatients 2017

The Care Quality Commission

The Care Quality Commission is the independent regulator of health and adult social care in England. We make sure health and social care services provide people with safe, effective, compassionate, high-quality care, and we encourage care services to improve. Our role is to register care providers, and to monitor, inspect and rate services. If a service needs to improve, we take action to make sure this happens. We speak with an independent voice, publishing regional and national views of the major quality issues in health and social care.

Survey of adult inpatients 2017

To improve the quality of services that the NHS delivers, it is important to understand what people think about their care and treatment. One way of doing this is by asking people who have recently used health services to tell us about their experiences.

The fifteenth survey of adult inpatients involved 148 acute and specialist NHS trusts across England. Responses were received from 72,778 people, a response rate of 41%. Patients were eligible for the survey if they were aged 16 years or older, had spent at least one night in hospital and were not admitted to maternity or psychiatric units. Trusts sampled patients discharged during July 2017¹. Trusts counted back from the last day of July 2017, including every consecutive discharge, until they had selected 1250 patients (or, for a small number of specialist trusts who could not reach the required sample size, until they had reached 1st January 2017). Fieldwork took place between September 2017 and January 2018.

Surveys of adult inpatients were also carried out in 2002 and annually from 2004 to 2016. They are part of a wider programme of NHS patient surveys, which cover a range of topics including emergency departments, children's inpatient and day-cases, maternity services and community mental health services. To find out more about our programme and for the results from previous surveys, please see the links contained in the further information section.

The Care Quality Commission will use the results from this survey in our regulation, monitoring and inspection of NHS acute trusts in England. We will use data from the survey in our system of CQC Insight, which provides inspectors with an assessment of performance in areas of care within an NHS trust that need to be followed up. Survey data will also be used to support CQC inspections. NHS England will use the results to check progress and improvement against the objectives set out in the NHS mandate, and the Department of Health and Social Care will hold them to account for the outcomes they achieve. NHS Improvement will use the results to guide its work to improve the quality of care provided by NHS Trusts and Foundation Trusts.

Interpreting the report

This report shows how a trust scored for each question in the survey, compared with the range of results from all other trusts that took part. It uses an analysis technique called the '**expected range**' to determine if your trust is performing 'about the same', 'better' or 'worse' compared with other trusts. For more information, please see the 'methodology' section below. This approach is designed to help understand the performance of individual trusts, and to identify areas for improvement.

A 'section' score is also provided, labelled S1-S11 in the 'section scores'. The scores for each question are grouped according to the sections of the questionnaire, for example, 'the hospital and ward', 'doctors', 'nurses' and so forth.

This report shows the same data as published on the CQC website (<http://www.cqc.org.uk/surveys/inpatient>). The CQC website displays the data in a simplified way, identifying whether a trust performed 'better', 'worse' or 'about the same' as the majority of other trusts for each question and section.

¹37 trusts sampled additional months because of small patient throughputs.

Standardisation

Trusts have differing profiles of people who use their services. For example, one trust may have more male inpatients than another trust. This can potentially affect the results because people tend to answer questions in different ways, depending on certain characteristics. For example, older respondents tend to report more positive experiences than younger respondents, and women tend to report less positive experiences than men. This could potentially lead to a trust's results appearing better or worse than if they had a slightly different profile of people.

To account for this, we standardise the data. Results have been standardised by the age, sex and method of admission (emergency or elective) of respondents to ensure that no trust will appear better or worse than another because of its respondent profile. This helps to ensure that each trust's age-sex-admission type profile reflects the national age-sex-admission type distribution (based on all of the respondents to the survey). Standardisation therefore enables a more accurate comparison of results from trusts with different population profiles. In most cases this will not have a large impact on trust results; it does, however, make comparisons between trusts as fair as possible.

Scoring

For each question in the survey, the individual (standardised) responses are converted into scores on a scale from 0 to 10. A score of 10 represents the best possible response and a score of zero the worst. The higher the score for each question, the better the trust is performing.

It is not appropriate to score all questions in the questionnaire as not all of the questions assess the trusts. For example, they may be descriptive questions such as Q1 asking respondents if their inpatient stay was planned in advance or an emergency; or they may be 'routing questions' designed to filter out respondents to whom following questions do not apply. An example of a routing question would be Q44 "During your stay in hospital, did you have an operation or procedure?" For full details of the scoring please see the technical document (see further information section).

Graphs

The graphs in this report show how the score for the trust compares to the range of scores achieved by all trusts taking part in the survey. The black diamond shows the score for your trust. The graph is divided into three sections:

- If your trust's score lies in the grey section of the graph, its result is 'about the same' as most other trusts in the survey
- If your trust's score lies in the orange section of the graph, its result is 'worse' compared with most other trusts in the survey.
- If your trust's score lies in the green section of the graph, its result is 'better' compared with most other trusts in the survey.

The text to the right of the graph states whether the score for your trust is 'better' or 'worse' compared with most other trusts in the survey. If there is no text the score is 'about the same'. These groupings are based on a rigorous statistical analysis of the data, as described in the following 'methodology' section.

Methodology

The 'about the same,' 'better' and 'worse' categories are based on an analysis technique called the '**expected range**' which determines the range within which the trust's score could fall without differing significantly from the average, taking into account the number of respondents for each trust and the scores for all other trusts. If the trust's performance is outside of this range, it means that it performs significantly above/below what would be expected. If it is within this range, we say that its performance is 'about the same'. This means that where a trust is performing 'better' or 'worse' than the majority of other trusts, it is very unlikely to have occurred by chance.

In some cases there will be no orange and/or no green area in the graph. This happens when the expected range for your trust is so broad it encompasses either the highest possible score for all trusts (no green section) or the lowest possible score for all trusts (no orange section). This could be because there were few respondents and / or a lot of variation in their answers.

Please note that if fewer than 30 respondents have answered a question, no score will be displayed for this question (or the corresponding section). This is because the uncertainty around the result is too great. A technical document providing more detail about the methodology and the scoring applied to each question is available on the CQC website (see further information section).

Tables

At the end of the report you will find tables containing the data used to create the graphs. These tables also show the response rate for your trust and background information about the people that responded.

Scores from last year's survey are also displayed. The column called 'change from 2016' uses arrows to indicate whether the score for this year shows a statistically significant increase (up arrow), a statistically significant decrease (down arrow) or has shown no statistically significant change (no arrow) compared with 2016. A statistically significant difference means that the change in the results is very unlikely to have occurred by chance. Significance is tested using a two-sample t-test.

Where a result for 2016 is not shown, this is because the question was either new this year, or the question wording and/or the response categories have been changed. It is therefore not possible to compare the results as we do not know if any change is caused by alterations in the survey instrument, or variation in a trust's performance. Comparisons are also not able to be shown if a trust has merged with other trusts since the 2016 survey, or if a trust committed a sampling error in 2016. Please note that comparative data are not shown for sections as the questions contained in each section can change year on year.

Notes on specific questions

Please note that a variety of acute trusts take part in this survey and not all questions are applicable to every trust. The section below details modifications to certain questions, in some cases this will apply to all trusts, in other cases only to some trusts.

All trusts

Q36: Two new response options, "I was not given any information about my treatment or condition" and "Don't know/ can't remember", were added to question 36 ("How much information about your condition or treatment was given to you?"). As a result data is no longer comparable to the same question in 2016.

Q50 and Q51: The information collected by Q50 "On the day you left hospital, was your discharge delayed for any reason?" and Q51 "What was the main reason for the delay?" are presented together to show whether a patient's discharge was delayed by reasons attributable to the hospital. The combined question in this report is labelled as Q51 and is worded as: "Discharge delayed due to wait for medicines/to see doctor/for ambulance."

Q52: Information from Q50 and Q51 has been used to score Q52 "How long was the delay?" This assesses the length of a delay to discharge for reasons attributable to the hospital.

Q53 and Q56: Respondents who answered Q53 "Where did you go after leaving hospital?" as "I was transferred to another hospital" were not scored for question Q56 ("Before you left hospital, were you given any written or printed information about what you should or should not do after leaving hospital?"). This decision was taken as there is not a requirement for hospital transfers.

Trusts with female patients only

Q11: If your trust offers services to women only, a trust score for Q11 "While in hospital, did you ever share a sleeping area, for example a room or bay, with patients of the opposite sex?" is not shown.

Trusts with no A&E Department

Q3 and Q4: The results to these questions are not shown for trusts that do not have an A&E department.

Questions added and removed for 2017

The following questions are new for 2017 and will therefore have no comparative results:

Q11: "While in hospital, did you ever share a sleeping area, for example a room or bay, with patients of the opposite sex?"

Q13: "Did the hospital staff explain the reasons for being moved in a way you could understand?"

Q22: "During your time in hospital, did you get enough to drink?"

Q31: "Did you have confidence and trust in any other clinical staff treating you (e.g. physiotherapists, speech therapists, psychologists)?"

Q43: "If you needed attention, were you able to get a member of staff to help you within a reasonable time?"

Q63: "Did the doctors or nurses give your family, friends or carers all the information they needed to help care for you?"

Q71: "Did you feel well looked after by the non-clinical hospital staff (e.g. cleaners, porters, catering staff)?"

The following questions were removed from the 2017 questionnaire (2016 numbering):

Q13: "After you moved to another ward (or wards), did you ever share a sleeping area, for example a room or bay, with patients of the opposite sex?"

Q14: "While staying in hospital, did you ever use the same bathroom or shower area as patients of the opposite sex?"

Q18: "How clean were the toilets and bathrooms that you used in hospital?"

Q19: "Did you feel threatened during your stay in hospital by other patients or visitors?"

Q44: "How many minutes after you used the call button did it usually take before you got the help you needed?"

Q46: "Beforehand, did a member of staff explain the risks and benefits of the operation or procedure in a way you could understand?"

Q47: "Beforehand, did a member of staff explain what would be done during the operation or procedure?"

Q50: "Before the operation or procedure, were you given an anaesthetic or medication to put you to sleep or control your pain?"

Q51: "Before the operation or procedure, did the anaesthetist or another member of staff explain how he or she would put you to sleep or control your pain in a way you could understand?"

Q73: "During your time in hospital did you feel well looked after by hospital staff?"

For more information on questionnaire redevelopment and the rationale behind adding or removing individual questions please refer to the Survey Development Report, available here:

<http://www.nhssurveys.org/survey/2008>

Further information

The full national results are on the CQC website, together with an A to Z list to view the results for each trust (alongside the technical document outlining the methodology and the scoring applied to each question):

<http://www.cqc.org.uk/inpatientsurvey>

The results for the adult inpatient surveys from 2002 to 2016 can be found at:

<http://www.nhssurveys.org/surveys/425>

Full details of the methodology of the survey can be found at:

<http://www.nhssurveys.org/surveys/1084>
