

# Patient survey report 2018

### NHS Patient Survey Programme Adult Inpatient Survey 2018

### The Care Quality Commission

The Care Quality Commission is the independent regulator of health and adult social care in England. We make sure health and social care services provide people with safe, effective, compassionate, high-quality care and we encourage care services to improve. Our role is to register care providers, and to monitor, inspect and rate services. If a service needs to improve, we take action to make sure this happens. We speak with an independent voice, publishing regional and national views of the major quality issues in health and social care.

### **Adult Inpatient Survey 2018**

To improve the quality of services that the NHS delivers, it is important to understand what people think about their care and treatment. One way of doing this is by asking people who have recently used health services to tell us about their experiences.

The 2018 survey of adult inpatient (sixteenth iteration of the survey) involved 144 acute and specialist NHS trusts. 76,668 people responded to the survey, yielding an adjusted response rate of 45%.

Patients were eligible for the survey if they were aged 16 years or older, had spent at least one night in hospital and were not admitted to maternity or psychiatric units. Trusts sampled patients discharged during July 2018<sup>1</sup>. Trusts counted back from the last day of July 2018, including every consecutive discharge, until they had selected 1,250 patients (or, for a small number of specialist trusts who could not reach the required sample size, until they had reached 1st January 2018). Fieldwork took place between August 2018 and January 2019.

Surveys of adult inpatients were also carried out in 2002 and annually from 2004 to 2018. Although questionnaire redevelopments took place over the years, the survey results for this year are largely comparable to those from previous iterations.

The Adult Inpatient Survey is part of a wider programme of NHS patient surveys which covers a range of topics, including children and young people's services, community mental health services, urgent and emergency care services and maternity services. To find out more about the programme and to see the results from previous surveys, please see the links in the 'Further information' section.

CQC will use the results from the survey in the regulation, monitoring and inspection of NHS acute trusts in England. We will use data from the survey in our system of CQC Insight, which provides inspectors with an assessment of performance in areas of care within an NHS trust that need to be followed up. Survey data will also be used to support CQC inspections. NHS England will use the results to check progress and improvement against the objectives set out in the NHS mandate, and the Department of Health and Social Care will hold providers to account for the outcomes they achieve. NHS Improvement will use the results to inform their oversight model for the NHS.

This research was carried out in accordance with the international standard for organisations conducting social research (accreditation to ISO20252:2012; certificate number GB08/74322).

### Interpreting the report

This report shows how your trust scored for each evaluative question in the survey, compared with other trusts that took part. It uses an analysis technique called the '**expected range**' to determine if your trust is performing 'about the same', 'better' or 'worse' compared with most other trusts. For more information on the expected range, please see the 'methodology' section below. This approach is designed to help understand the performance of individual trusts, and to identify areas for improvement.

<sup>&</sup>lt;sup>1</sup>39 trusts sampled additional months because of small patient throughputs.

This report shows the same data as published on the CQC website

(<u>http://www.cqc.org.uk/surveys/inpatient</u>). The CQC website displays the data in a more simplified way, identifying whether a trust performed 'better', 'worse' or 'about the same' as the majority of other trusts for each question and section.

#### Standardisation

People's characteristics, such as age and gender, can influence their experience of care and the way they report it. For example, research shows that men tend to report more positive experiences than women, and older people more so than younger people. Since trusts have differing profiles of people who use their services, this could potentially affect their results and make trust comparisons difficult. A trust's results could appear better or worse than if they had a slightly different profile of people.

To account for this, we 'standardise' the data, which means we apply a weight to individual responses to account for differences in demographic profile between trusts. For each trust, results have been standardised by age, gender and method of admission (emergency or elective) of respondents to reflect the 'national' age-gender-admission type distribution (based on all respondents to the survey). This helps to ensure that no trust will appear better or worse than another because of its respondent profile. It therefore enables a more accurate comparison of results from trusts with different population profiles. In most cases this standardisation will not have a large impact on trust results; it does, however, make comparisons between trusts as fair as possible.

#### Scoring

For each question in the survey, the individual (standardised) responses are converted into scores on a scale from 0 to 10. A score of 10 represents the best possible response and a score of zero the worst. The higher the score for each question, the better the trust is performing.

It is not appropriate to score all questions in the questionnaire as not all of the questions assess the trust. For example, they may be descriptive questions such as Q1 asking respondents if their inpatient stay was planned in advance or an emergency; or they may be 'routing questions' designed to filter out respondents to whom the following questions do not apply. An example of a routing question would be Q44 "During your stay in hospital, did you have an operation or procedure?" For full details of the scoring please see the technical document (see 'Further information' section).

Section scoring is computed as the arithmetic mean of questions' score after weighting is applied.

#### Graphs

The graphs in this report show how the score for the trust compares to the range of scores achieved by all trusts taking part in the survey. The black diamond shows the score for your trust. The graph is divided into three sections:

- If your trust's score lies in the grey section of the graph, its result is 'about the same' as most other trusts in the survey;
- If your trust's score lies in the orange section of the graph, its result is 'worse' compared with most other trusts in the survey;
- If your trust's score lies in the green section of the graph, its result is 'better' compared with most other trusts in the survey.

The text to the right of the graph states whether the score for your trust is 'better' or 'worse' compared with most other trusts. If there is no text, the score is 'about the same.' These groupings are based on a rigorous statistical analysis of the data, as described in the following 'Methodology' section.

#### Methodology

The 'about the same,' 'better' and 'worse' categories are based on an analysis technique called the '**expected range**' which determines the range within which the trust's score could fall without differing significantly from the average, taking into account the number of respondents for each trust and the scores for all other trusts. If the trust's performance is outside of this range, it means that it

performs significantly above or below what would be expected. If it is within this range, we say that its performance is 'about the same'. Where a trust is identified as performing 'better' or 'worse' than the majority of other trusts, it is very unlikely to have occurred by chance.

In some cases, there will be no orange and/or no green area in the graph. This happens when the expected range for your trust is so broad it encompasses either the highest possible score for all trusts (no green section) or the lowest possible score for all trusts (no orange section). This could be because there were few respondents and/or a lot of variation in their answers.

Please note that if fewer than 30 respondents have answered a question, no score will be displayed for this question (and the corresponding section<sup>2</sup>). This is because the uncertainty around the result is too great.

A technical document providing more detail about the methodology and the scoring applied to each question is available on the CQC website (see 'Further information' section).

#### Tables

At the end of the report you will find tables containing the data used to create the graphs, the response rate for your trust and background information about the people that responded.

Scores from last year's survey are also displayed where available. The column called 'Change from 2017' uses arrows to indicate whether the score for this year shows a statistically significant increase (up arrow), a statistically significant decrease (down arrow) or has shown no statistically significant change (no arrow) compared with 2017. A statistically significant difference means that the change in the result is very unlikely to have occurred by chance. Significance is tested using a two-sample t-test with a significance level of 0.05.

Please note that comparative data is not shown for sections as the questions contained in each section can change year on year.

Where a result for 2017 is not shown, this is because the question was either new this year, or the question wording and/or the response categories have been changed. It is therefore not possible to compare the results as we do not know if any change is caused by alterations in the survey instrument, or variation in a trust's performance.

Comparisons are also not able to be shown if a trust has merged with other trusts since the 2017 survey, or if a trust committed a sampling error in 2017.

### Notes on specific questions

Please note that a variety of acute trusts take part in this survey and not all questions are applicable to every trust. The section below details modifications to certain questions, in some cases this will apply to all trusts, in other cases only to some trusts.

#### All trusts

**Q50 and Q51:** The information collected by Q50 "On the day you left hospital, was your discharge delayed for any reason?" and Q51 "What was the main reason for the delay?" are presented together to show whether a patient's discharge was delayed by reasons attributable to the hospital.

The combined question in this report is labelled as Q51 and is worded as: "Discharge delayed due to wait for medicines/to see doctor/for ambulance."

**Q52:** Information from Q50 and Q51 has been used to score Q52 "How long was the delay?" This assesses the length of a delay to discharge for reasons attributable to the hospital.

**Q53 and Q56:** Respondents who answered Q53 "Where did you go after leaving hospital?" as "I was transferred to another hospital" were not scored for Q56 ("Before you left hospital, were you given any written or printed information about what you should or should not do after leaving

<sup>&</sup>lt;sup>2</sup>The section score is not displayed as it would include fewer questions compared with other trusts hence it is not a fair comparison.

hospital?"). This decision was taken as there is not a requirement for hospital transfers.

#### Trusts with female patients only

**Q11:** If your trust offers services to women only, the score for Q11 "While in hospital, did you ever share a sleeping area, for example a room or bay, with patients of the opposite sex?" is not shown.

#### **Trusts with no A&E Department**

**Q3 and Q4:** The results to these questions are not shown for trusts that do not have an A&E department.

#### Notes on question comparability

The following questions were new questions for 2018, and it is therefore not possible to compare with previous years:

**Q66.** Was the care and support you expected available when you needed it? (section 9 "Leaving hospital")

**Q69.** During this hospital stay, did anyone discuss with you whether you would like to take part in a research study? (section 10 "Overall views of care and services")

The following question was removed from the 2018 questionnaire (2017 numbering):

Q59. Were you told how to take your medication in a way you could understand?

For more information on questionnaire redevelopment and the rationale behind adding or removing individual questions please refer to the Survey Development Report, available here: <u>http://nhssurveys.org/survey/2117</u>

### **Further information**

The full national results are on the CQC website, together with an A to Z list to view the results for each trust (alongside the technical document outlining the methodology and the scoring applied to each question):

http://www.cqc.org.uk/inpatientsurvey

The results for England, and trust level results, can be found on the CQC website. You can also find a 'technical document' here which describes the methodology for analysing the trust level results: <u>http://www.cqc.org.uk/inpatientsurvey</u>

The results for the adult inpatient surveys from 2002 to 2017 can be found at: <u>http://www.nhssurveys.org/surveys/425</u>

Full details of the methodology for the survey, including questionnaires, letters sent to patients, instructions for trusts and contractors to carry out the survey, and the survey development report, are available at:

http://www.nhssurveys.org/surveys/1203

More information on the NHS Patient Survey Programme, including results from other surveys and a schedule of current and forthcoming surveys can be found at: <u>http://www.cqc.org.uk/content/surveys</u>

More information about how CQC monitors hospitals is available on the CQC website at: <a href="http://www.cqc.org.uk/what-we-do/how-we-use-information/monitoring-nhs-acute-hospitals">http://www.cqc.org.uk/what-we-do/how-we-use-information/monitoring-nhs-acute-hospitals</a>
