

Patient survey report 2014

National children's inpatient and day case survey 2014
Wirral University Teaching Hospital NHS Foundation Trust

National NHS patient survey programme

National children's inpatient and day case survey 2014

The Care Quality Commission

The Care Quality Commission (CQC) is the independent regulator of health and adult social care in England.

Our purpose is to make sure hospitals, care homes, dental and GP surgeries, and all other care services in England provide people with safe, effective, compassionate and high-quality care, and we encourage them to make improvements.

Our role is to monitor, inspect and regulate services to make sure they meet fundamental standards of quality and safety, and to publish what we find, including performance ratings to help people choose care.

National children's inpatient and day case survey 2014

To improve the quality of services that the NHS delivers, it is important to understand what people think about their care and treatment. One way of doing this is by asking people who have recently used local health services to tell us about their experiences.

This survey focused on young patients who were admitted to hospital as inpatients or for treatment as day case patients. One hundred and thirty seven acute and specialist NHS trusts across England participated. We received feedback about the care of nearly 19,000 young patients, which is a response rate of 27%. Young patients were eligible to take part in the survey if they were:

- aged between 0-15 years
- not staying in hospital at the time patients were sampled
- not 'well babies' i.e. newborn babies where the mother is the primary patient
- were admitted to hospital in August 2014 (some trusts also sampled patients who were admitted in July or September also)

Questionnaires and reminders were sent to patients between October 2014 and January 2014.

The children's survey is part of a wider programme of NHS patient surveys, which covers a range of services including acute adult inpatients, A&E, maternity services and community mental health services. To find out more about our programme and the results from previous surveys, please see the links in the further information section.

The Care Quality Commission will use the results from this survey in our regulation, monitoring and inspection of NHS acute trusts in England. We will use data from the survey in our system of Intelligent Monitoring, which provides inspectors with an assessment of risk in areas of care within an NHS trust that need to be followed up. The survey data will also be included in the data packs that we produce for inspections.

NHS England will use the results to check progress and improvement against the objectives set out in the NHS mandate, and the Department of Health will hold them to account for the outcomes they achieve. The NHS Trust Development Authority will use the results to inform quality and governance assessments as part of their Oversight Model for NHS Trusts.

Interpreting the report

This report shows how a trust scored for each evaluative question in the survey, compared with other trusts. It uses an analysis technique called the '**expected range**' to determine if your trust is performing 'about the same', 'better' or 'worse' compared with other trusts. For more information, please see the 'methodology' section below. This approach is designed to help understand the performance of individual trusts, and to identify areas for improvement.

Results are presented in this report based on responses received from parents and carers about their child's care. Results show scores based on feedback from:

- parents and carers of patients aged 0-15 years
- parents and carers of patients aged 0-7 years (where questions are not comparable across other questionnaires)

Questionnaires were also completed directly by children and young people. Unfortunately for your trust, it is not possible to use these results for the purpose of comparing results with other trusts as too few responses were received from children.

Responses from parents and carers are divided into these two groups because children under 8 years of age were not asked any questions. Parents and carers of these children were therefore asked more questions than the parents and carers of older children.

This report shows the same data as published on the CQC website available at the following link: www.cqc.org.uk/childrensurvey

Standardisation

Trusts have differing profiles of people who use their services. For example, one trust may have more younger patients than another trust. This can potentially affect the results because carers or parents may answer questions in different ways, depending on certain characteristics of their children. For example, the parents of older children may report more positive experiences than those of younger respondents. This could potentially lead to a trust's results appearing better or worse than if they had a slightly different profile of people.

To account for this, we 'standardise' the data. Results have been standardised in different ways for the different groups that took part in this survey. The data provided by children aged 8-15 has been standardised by route of admission (whether a patient was admitted as an emergency or their admission was planned) and the type of stay (day case or inpatient). The data provided by parents or carers of children aged 0-15 has been standardised by the same two variables plus survey age group (whether the child was aged 0-7 or 8-15). This helps to ensure that each trust's profile reflects the national distribution (based on all of the respondents to the survey). It therefore enables a more accurate comparison of results from trusts with different population profiles. In most cases this will not have a large impact on trust results; it does, however, make comparisons between trusts as fair as possible.

Scoring

For each question in the survey, the individual (standardised) responses are converted into scores on a scale from 0 to 10. A score of 10 represents the best possible response and a score of zero the worst. The higher the score for each question, the better the trust is performing.

It is not appropriate to score all questions in the questionnaire as not all of the questions assess the trusts in any way, for example, they may be 'routing questions' designed to filter out respondents to whom following questions do not apply.

For full details of the scoring please see the technical document (see further information section).

Graphs

The graphs in this report show how the score for the trust compares to the range of scores achieved by all trusts taking part in the survey. The black diamond shows the score for your trust. The graph is divided into three sections:

- If your trust's score lies in the orange section of the graph, its result is 'about the same' as most other trusts in the survey.
- If your trust's score lies in the red section of the graph, its result is 'worse' compared with most other trusts in the survey.
- If your trust's score lies in the green section of the graph, its result is 'better' compared with most other trusts in the survey.

The text to the right of the graph clearly states whether the score for your trust is 'better' or 'worse'

compared with most other trusts in the survey. If there is no text the score is 'about the same'. These groupings are based on a rigorous statistical analysis of the data, as described in the following 'methodology' section.

Graphs are presented based upon themes, under each theme will be both the data from adults and from children/young patients.

Methodology

The 'about the same,' 'better' and 'worse' categories are based on an analysis technique called the '**expected range**' which determines the range within which the trust's score could fall without differing significantly from the average, taking into account the number of respondents for each trust and the scores for all other trusts. If the trust's performance is outside of this range, it means that it performs significantly above/below what would be expected. If it is within this range, we say that its performance is 'about the same'. This means that where a trust is performing 'better' or 'worse' than the majority of other trusts, it is very unlikely to have occurred by chance.

In some cases there will be no red and/or no green area in the graph. This happens when the expected range for your trust is so broad it encompasses either the highest possible score for all trusts (no green section) or the lowest possible for all trusts score (no red section). This could be because there were few respondents and / or a lot of variation in their answers.

Please note that if fewer than 30 respondents have answered a question, no score will be displayed for this question (or the corresponding section). This is because the uncertainty around the result is too great.

A technical document providing more detail about the methodology and the scoring applied to each question is available on the CQC website (see further information section).

Tables

At the end of the report you will find tables containing the data used to create the graphs, the response rate for your trust and background information about the young people and their parents and carers that responded.

Further information

The full national results are on the CQC website, together with an A to Z list to view the results for each trust (alongside the technical document outlining the methodology and the scoring applied to each question):

www.cqc.org.uk/childrensurvey
