NHS Adult Inpatient Survey 2020 Benchmark Report

East and North Hertfordshire NHS Trust

1 Adult Inpatient Survey 2020 | RWH | East and North Hertfordshire NHS Trust

Background and methodology

This section includes:

- an explanation of the NHS Patient Survey Programme
- information on the Adult Inpatient 2020 survey
- a description of key terms used in this report
- navigating the report

Background and methodology

The NHS Patient Survey Programme

The NHS Patient Survey Programme (NPSP) collects feedback on adult inpatient care, maternity care, children and young people's inpatient and day services, urgent and emergency care, and community mental health services.

The NPSP is commissioned by the Care Quality Commission (CQC); the independent regulator of health and adult social care in England.

As part of the NPSP, the Adult Inpatient Survey has been conducted annually since 2002. The CQC use the results from the survey in the regulation, monitoring and inspection of NHS acute trusts in England.

To find out more about the survey programme and to see the results from previous surveys, please refer to the section on further information on this page.

The Adult Inpatient Survey 2020

The survey was administered by the Coordination Centre for Mixed Methods (CCMM) at Ipsos MORI. A total of 169,176 patients were invited to participate in the survey across 137 acute and specialist NHS trusts. Completed responses were received from 73,015 patients, an adjusted response rate of 45.9%.

Patients were eligible to participate in the survey if they were aged 16 years or over, had spent at least one night in hospital, and were not admitted to maternity or psychiatric units. A full list of eligibility criteria can be found in the survey <u>sampling</u> <u>instructions</u>.

Trusts sampled patients who met the eligibility criteria and were discharged from hospital during November 2020. Trusts counted back from the last day of November 2020, sampling every consecutively discharged patient until they had selected 1,250 patients. Some smaller trusts, which treat fewer patients, included patients who were treated in hospital earlier than November 2020 (as far back as May 2020), to achieve a large enough sample.

Fieldwork took place between January and May 2021.

Trend data

The Adult Inpatient 2020 survey was significantly different to previous years' surveys with regards to methodology, sampling month and questionnaire content. This year's survey was conducted using a push-to-web methodology (offering both online and paper completion). The questionnaire was amended significantly, with changes to both question wording and order. The 2020 results are therefore not comparable with previous years' data and trend data is not available. In future years, trend data will be incorporated into these reports.

Further information about the survey

- For published results for other surveys in the NPSP, and for information to help trusts implement the surveys across the NPSP, please visit the <u>NHS</u> <u>Surveys website</u>.
- To learn more about CQC's survey programme, please visit the <u>CQC website</u>.

Key terms used in this report

The 'expected range' technique

This report shows how your trust scored for each evaluative question in the survey, compared with other trusts that took part. It uses an analysis technique called the 'expected range' to determine if your trust is performing about the same, better or worse compared with most other trusts. This is designed to help understand the performance of individual trusts and identify areas for improvement.

This report also includes site level benchmarking. This allows you to compare the results for sites within your trust with all other sites across trusts. It is important to note that the performance ratings presented here may differ from that presented in the trust level benchmarking.

More information can be found in the Appendix.

Standardisation

Demographic characteristics, such as age and gender, can influence patients' experience of care and the way they report it. For example, research shows that men tend to report more positive experiences than women, and older people more so than younger people.

Since trusts have differing profiles of patients, this could make fair trust comparisons difficult. To account for this, we 'standardise' the results, which means we apply a weight to individual patient responses to account for differences in demographic profile between trusts.

For each trust, results have been standardised by the age, sex and method of admission (emergency or elective) of respondents to reflect the 'national' age, sex, and method of admission distribution (based on all respondents to the survey). This helps ensure that no trust will appear better or worse than another because of its profile, and enables a fairer and more useful comparison of results across trusts. In most cases this standardisation will not have a large impact on trust results. Site level results are standardised in the same way.

Scoring

For each question in the survey, the individual (standardised) responses are converted into scores on a scale of 0 to 10. A score of 10 represents the best possible result and a score of 0 the worst. The higher the score for each question, the better the trust is performing. Only evaluative questions in the questionnaire are scored. Some questions are

descriptive (for example Q1) and others are 'routing questions', which are designed to filter out respondents to whom the following questions do not apply (for example Q6). These questions are not scored. Section scoring is computed as the arithmetic mean of question scores for the section after weighting is applied.

Trust average

The 'trust average' mentioned in this report is the arithmetic mean of all trusts' scores after weighting is applied.

Suppressed data

If fewer than 30 respondents have answered a question, no score will be displayed for that question (or the corresponding section the question contributes to).

Further information about the methods

For further information about the statistical methods used in this report, please refer to the survey technical document.

Using the survey results

Navigating this report

This report is split into five sections:

- **Background and methodology** provides information about the survey programme, how the survey is run, and how to interpret the data.
- Headline results includes key trust-level findings relating to the patients who took part in the survey, benchmarking, and top and bottom scores. This section provides an overview of results for your trust, identifying areas where your organisation performs better than the average and where you may wish to focus improvement activities.
- Benchmarking shows how your trust scored for each evaluative question in the survey, compared with other trusts that took part; using the 'expected range' analysis technique. This allows you to see the range of scores achieved and compare yourself with the other organisations that took part in the survey. Benchmarking can provide you with an indication of where you perform better than the average, and what you should aim for in areas where you may wish to improve.

- Trust results includes the score for your trust; a comparison with other trusts in your region; a breakdown of scores across sites within your trust. It may be helpful to compare yourself with regional trusts, so you can learn from and share learnings with trusts in your area who care for similar populations. Internal benchmarking may be helpful so you can compare sites within your organisation, sharing best practice within the trust and identifying any sites that may need attention.
- **Appendix** includes additional data for your trust; further information on the survey methodology; interpretation of graphs in this report.

How to interpret the graphs in this report

There are several types of graphs in this report which show how the score for your trust compares to the scores achieved by all trusts that took part in the survey.

The two chart types used in the section 'benchmarking' use the 'expected range' technique to show results. For information on how to interpret these graphs, please refer to the <u>Appendix</u>.

Other data sources

More information is available about the following topics at their respective websites, listed below:

- Full national results; A-Z list to view the results for each trust; technical document: www.cqc.org.uk/inpatientsurvey
- National and trust-level data for all trusts who took part in the Adult Inpatient 2020 survey: <u>https://nhssurveys.org/surveys/survey/02-adults-inpatients/year/2020/</u>. Full details of the methodology for the survey, instructions for trusts and contractors to carry out the survey, and the survey development report can also be found on the NHS Surveys website.
- Information on the NHS Patient Survey Programme, including results from other surveys: <u>www.cqc.org.uk/content/surveys</u>
- Information about how the CQC monitors hospitals: <u>www.cqc.org.uk/what-we-do/how-we-use-information/monitoring-nhs-acute-hospitals</u>

Headline results

This section includes:

- information about your trust population
- an overview of benchmarking for your trust
- the top and bottom scores for your trust

Who took part in the survey?

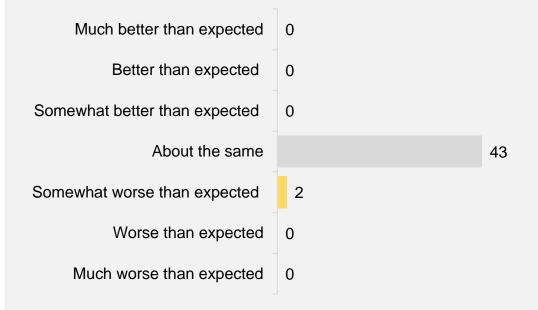

This slide is included to help you interpret responses and to provide information about the population of patients who took part in the survey.

1,250 invited to take part	Ethnicity	Religion
 581 completed 74% urgent/emergency admission 26% planned admission 50% response rate 46% average response rate for all trusts 41% response rate for your trust last year 	White92%Mixed1%Asian or Asian British4%Black or Black British2%Arab or other ethnic group<0.5%Not known2%	No religion25%Buddhist<0.5%Christian66%Hindu1%Jewish1%Muslim1%Sikh1%Other1%Prefer not to say4%
Long-term conditions Joint Conditions of participants said they have physical or mental health conditions, disabilities or illnesses that have lasted or are expected to last 12 months or more (excluding those who selected "I would prefer not to say"). Summary of findings for your trust

Comparison with other trusts

The number of questions at which your trust has performed better, worse, or about the same compared with all other trusts.

Comparison with last year's results

Results for the Adult Inpatient 2020 survey are not comparable with results from previous years. This is because of a change in survey methodology, extensive redevelopment of the guestionnaire, and a different sampling month. More information on this is available in the survey development report.

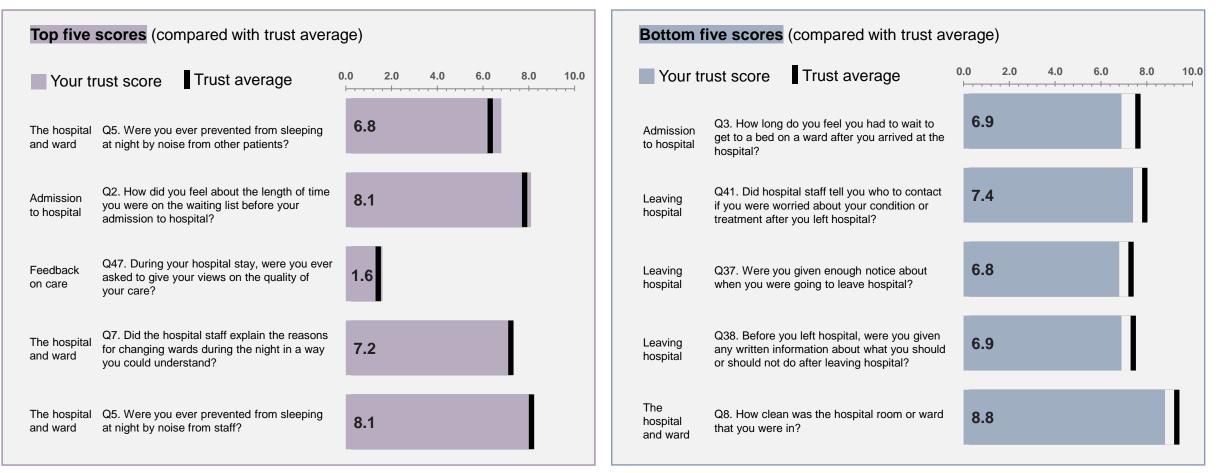

The Adult Inpatient 2021 benchmark reports will include an overview of the number of questions at which your trust's performance has significantly improved, significantly declined, or not significantly changed compared with your result from the previous year.

For a breakdown of the questions where your trust has performed better or worse compared with all other trusts, please refer to the appendix section "comparison" to other trusts".

Best and worst performance relative to the trust average

These five questions are calculated by comparing your trust's results to the trust average.

- Top five scores: These are the five results for your trust that are highest compared with the trust average. If none of the results for your trust are above the trust average, then the results that are closest to the trust average have been chosen, meaning a trust's best performance may be worse than the trust average.
- Bottom five scores: These are the five results for your trust that are lowest compared with the trust average. If none of the results for your trust are below the trust average, then the results that are closest to the trust average have been chosen, meaning a trust's worst performance may be better than the trust average.

10 Adult Inpatient Survey 2020 | RWH | East and North Hertfordshire NHS Trust

Benchmarking

This section includes:

- how your trust scored for each evaluative question in the survey, compared with other trusts that took part
- an analysis technique called the 'expected range' to determine if your trust is performing about the same, better or worse compared with most other trusts

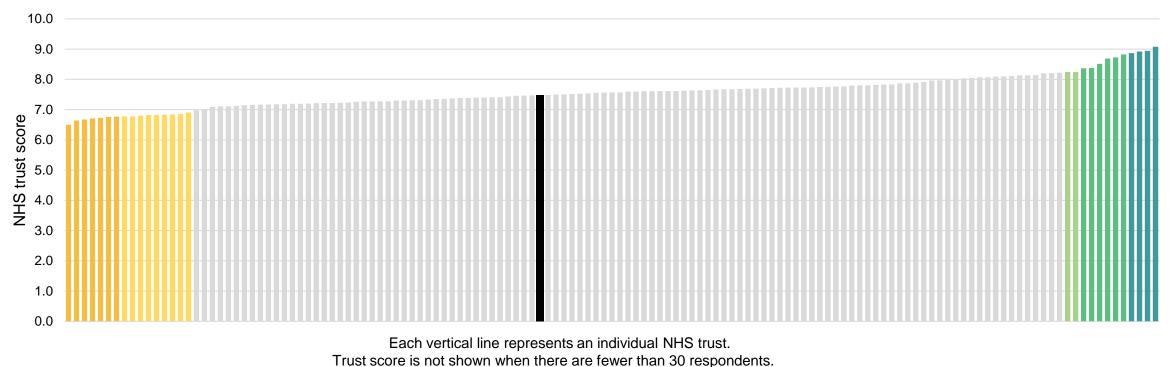

Section 1. Admission to hospital

Section score

This shows the range of section scores for all NHS trusts. The colour of the line denotes whether a trust has performed better, worse, or about the same compared with all other trusts (as detailed in the legend). The result for your trust is shown in black. Please note, as a result of the 'expected range' analysis technique used, a trust could be categorised as 'about the same' whilst having a lower score than a 'worse than expected' trust, or categorised as 'about the same' whilst having a lower score than a 'worse than expected' trust, or categorised as 'about the same' whilst having a higher score than a 'better than expected' trust.

Much worse than expected	Worse than expected	Somewhat worse than expected	About the same	
Somewhat better than expected	Better than expected	Much better than expected	Your trust	

Your trust section score = 7.5 (About the same)

Appendix

Comparison to other trusts

The questions at which your trust has performed much worse or worse compared with all other trusts are listed below. The questions where your trust has performed about the same compared with all other trusts have not been listed.

Much worse than expected	Worse than expected		
• Your trust has not performed "much worse than expected" for any questions.	Your trust has not performed "worse than expected" for any questions.		

Comparison to other trusts

The questions at which your trust has performed somewhat worse or somewhat better compared with all other trusts are listed below. The questions where your trust has performed about the same compared with all other trusts have not been listed.

Somewhat worse than expected	Somewhat better than expected		
 Q8. How clean was the hospital room or ward that you were in? Q37. Were you given enough notice about when you were going to leave hospital? 	Your trust has not performed "somewhat better than expected" for any questions.		

Comparison to other trusts

The questions at which your trust has performed better or much better compared with all other trusts are listed below. The questions where your trust has performed about the same compared with all other trusts have not been listed.

Better than expected	Much better than expected		
• Your trust has not performed "better than expected" for any questions.	Your trust has not performed "much better than expected" for any questions.		

Results for East and North Hertfordshire NHS Trust

Where patient experience is best

- Noise from other patients: patients not being bothered by noise at night from other patients
- Waiting to be admitted: patients feeling that they waited the right amount of time on the waiting list before being admitted to hospital
- Feedback on care: patients being asked to give their views on the quality of their care
- Changing wards during the night: staff explaining the reason for patients needing to change wards during the night
- ✓ Noise from staff: patients not being bothered by noise at night from staff

Where patient experience could improve

- Waiting to get to a bed: patients feeling that they waited the right amount of time to get to a bed on a ward after they arrived at the hospital
- Contact: patients being given information about who to contact if they were worried about their condition or treatment after leaving hospital
- Notice about leaving hospital: patients being given enough notice about when they were going to leave hospital
- Written information on discharge: patients being given written information about what they should or should not do after leaving hospital
- Cleanliness: patients feeling that the hospital room or ward they were in was clean

These topics are calculated by comparing your trust's results to the average of all trusts. "Where patient experience is best": These are the five results for your trust that are highest compared with the average of all trusts. "Where patient experience could improve": These are the five results for your trust that are lowest compared with the average of all trusts.

This survey looked at the experiences of people who were discharged from an NHS acute hospital in November 2020. Between January 2021 and May 2021, a questionnaire was sent to 1250 inpatients at East and North Hertfordshire NHS Trust who had attended in late 2020. Responses were received from 581 patients at this trust. If you have any questions about the survey and our results, please contact [NHS TRUST TO INSERT CONTACT DETAILS].

How to interpret benchmarking in this report

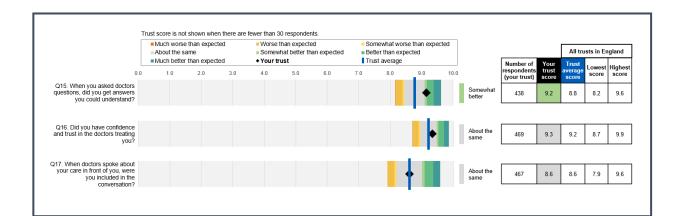

Trust level benchmarking

The charts in the 'benchmarking' section show how the score for your trust compares to the range of scores achieved by all trusts taking part in the survey. The black line shows the score for your trust. The graphs are divided into seven sections, comparing the score for your trust to most other trusts in the survey:

- If your trust's score lies in the **dark green section** of the graph, its result is 'Much better than expected'.
- If your trust's score lies in the **mid-green section** of the graph, its result is 'Better than expected'.
- If your trust's score lies in the **light green section** of the graph, its result is 'Somewhat better than expected'.
- If your trust's score lies in the **grey section** of the graph, its result is 'About the same'.
- If your trust's score lies in the **yellow section** of the graph, its result is 'Somewhat worse than expected'.
- If your trust's score lies in the light orange section of the graph, its result is 'Worse than expected'.
- If your trust's score lies in the **dark orange** section of the graph, its result is 'Much worse than expected'.

These groupings are based on a rigorous statistical analysis of the data termed the 'expected range' technique.

How to interpret benchmarking in this report (continued)

Trust level benchmarking

The 'much better than expected,' 'better than expected', 'somewhat better than expected', 'about the same', 'somewhat worse than expected', 'worse than expected' and 'much worse than expected' categories are based on an analysis technique called the 'expected range'. Expected range determines the range within which a trust's score could fall without differing significantly from the average, taking into account the number of respondents for each trust, to indicate whether the trust has performed significantly above or below what would be expected.

If it is within this expected range, we say that the trust's performance is 'about the same' as other trusts. Where a trust is identified as performing 'better' or 'worse' than the majority of other trusts, the result is unlikely to have occurred by chance.

The question score charts show the trust scores compared to the minimum and maximum scores achieved by any trust. In some cases this minimum or maximum limit will mean that one or more of the bands are not visible – because the range of other bands is broad enough to include the highest or lowest score achieved by a trust this year. This could be because there were few respondents, meaning the confidence intervals around your data are slightly larger, or because there was limited variation between trusts for this question this year.

In some cases, a trust could be categorised as 'about the same' whilst having a lower score than a 'worse than expected' trust, or categorised as 'about the same' whilst having a higher score than a 'better than expected' trust. This occurs as the bandings are calculated through standard error rather than standard deviation. Standard error takes into account the number of responses achieved by a trust, and therefore the banding may differ for a trust with a low numbers of responses.

Site level benchmarking

The charts in the 'trust results' section present site level benchmarking. This allows you to compare the results for sites within your trust with all other sites across trusts. It is important to note that there may be differences between the average score of the sites provided and the overall score for the trust. This may be related to the size of the sites, results for suppressed sites or weighting, as sites and trusts are weighted separately. In addition, if a single site result is presented for a trust, the 'expected range' category may differ: although the score achieved will be the same for both the site and for the trust, the upper and lower boundary levels will differ between the two due to them being calculated differently in each case.

Additional information on the 'expected range' analysis technique can be found in the survey technical report on the NHS Surveys website.

An example of scoring

Each evaluative question is scored on a scale from 0 to 10. The scores represent the extent to which the patient's experience could be improved. A score of 0 is assigned to all responses that reflect considerable scope for improvement, whereas a score of 10 refers to the most positive patient experience possible. Where a number of options lay between the negative and positive responses, they are placed at equal intervals along the scale. Where options were provided that did not have any bearing on the trust's performance in terms of patient experience, the responses are classified as "not applicable" and a score is not given. Similarly, where respondents stated they could not remember or did not know the answer to a question, a score is not given.

Calculating an individual respondent's score

The following provides an example for the scoring system applied for each respondent. For question 15 "When you asked doctors questions, did you get answers you could understand":

- The answer code "Yes, always" would be given a score of 10, as this refers to the most positive patient experience possible.
- The answer code "Sometimes" would be given a score of 5, as it is placed at an equal interval along the scale.
- The answer code "No, never" would be given a score of 0, as this response reflects considerable scope for improvement.
- The answer codes "I did not have any questions" and "I did not feel able to ask questions" would not be scored, as they do not have a clear bearing on the trust's performance in terms of patient experience.

Calculating the trust score for each question

The weighted mean score for each trust, for each question, is calculated by dividing the sum of the weighted scores for a question by the weighted sum of all eligible respondents to the question for each trust. An example of this is provided in the <u>survey technical document</u>.

Calculating the section score

An arithmetic mean of each trust's question scores is taken to provide a score for each section.
