## Survey of people who use community mental health services 2014

### The Care Quality Commission

The Care Quality Commission (CQC) is the independent regulator of health and adult social care in England.

Our purpose is to make sure hospitals, care homes, dental and GP surgeries, and all other care services in England provide people with safe, effective, compassionate and high-quality care, and we encourage them to make improvements.

Our role is to monitor, inspect and regulate services to make sure they meet fundamental standards of quality and safety, and to publish what we find, including performance ratings to help people choose care.

### Survey of people who use community mental health services 2014

To improve the quality of services that the NHS delivers, it is important to understand what people think about their care and treatment. One way of doing this is by asking people who have recently used their local health services to tell us about their experiences.

The 2014 survey of people who use community mental health services involved 57<sup>1</sup> NHS trusts in England (including combined mental health and social care trusts, Foundation Trusts and community healthcare social enterprises that provide mental health services). We received responses from more than 13,500 people, a response rate of 29%. People aged 18 and over were eligible for the survey if they were receiving specialist care or treatment for a mental health condition and had been seen by the trust between 1st September 2013 and 30th November 2013. The survey included people in contact with local NHS mental health services, including those who receive care under the Care Programme Approach (CPA). Fieldwork took place between February and June 2014.

Similar surveys of community mental health services were carried out in 2010, 2011, 2012 and 2013. However, please note that the 2014 survey questionnaire was substantially redeveloped and updated in order to reflect changes in policy, best practice and patterns of service. This means that the results from the 2014 survey are **not comparable** with the results from the 2010-2013 surveys.<sup>2</sup>

The community mental health survey is part of a wider programme of NHS patient surveys, which covers a range of topics including acute inpatient, children's inpatient and day case services, A&E (emergency department) and maternity services. To find out more about our programme and the results from previous surveys, please see the links in the further information section.

The results from this survey will be used by the Care Quality Commission in its assessment of NHS mental health trusts in England. NHS England will use the results to check progress and improvement against the objectives set out in the NHS mandate, and the Department of Health will hold them to account for the outcomes they achieve. The Trust Development Authority will use the results to inform their oversight model for NHS.

### Interpreting the report

This report shows how a trust scored for each evaluative question in the survey, compared to other trusts. It is designed to help understand the performance of individual trusts, and to identify areas for improvement.

This report shows the same data as published on the CQC website available at the following link ([www.cqc.org.uk/PatientSurveyMentalHealth2014](http://www.cqc.org.uk/PatientSurveyMentalHealth2014)). The CQC website displays the data in a more

<sup>1</sup>One trust was excluded from the survey as it was unable to follow the sampling instructions as specified in the survey guidance.

<sup>2</sup>For more information, please see the development report available at: [www.nhssurveys.org/surveys/750](http://www.nhssurveys.org/surveys/750)

simplified way, identifying whether a trust performed 'Above' (better), 'Below' (worse) or 'Average' (about the same) as the majority of other trusts for each question and section. For more information on the analysis, please see the methodology section below.

A 'section' score is also provided, labelled S1-S9 in the 'section scores' on page 4. The scores for each question are grouped according to the sections of the questionnaire, for example, 'health and social care workers' and 'organising care' and so forth. Please note that Q3 (In the last 12 months, do you feel you have seen NHS mental health services often enough for your needs?) is in section nine ('Overall') as this was the only question that could be scored in the 'Care and Treatment' section of the questionnaire.

## **Standardisation**

Trusts have differing profiles of people who use their services. For example, one trust may have more male people than another trust. This can potentially affect the results because people tend to answer questions in different ways, depending on certain characteristics. For example, older respondents tend to report more positive experiences than younger respondents, and women tend to report less positive experiences than men. This could potentially lead to a trust's results appearing better or worse than if they had a slightly different profile of people.

To account for this, we 'standardise' the data. Results have been standardised by the age and gender of respondents to ensure that no trust will appear better or worse than another because of its respondent profile. This helps to ensure that each trust's age-gender type profile reflects the national age-gender type distribution (based on all of the respondents to the survey). It therefore enables a more accurate comparison of results from trusts with different population profiles. In most cases this will not have a large impact on trust results; it does, however, make comparisons between trusts as fair as possible.

## **Scoring**

For each question in the survey, the individual (standardised) responses are converted into scores on a scale from 0 to 10. A score of 10 represents the best possible response and a score of zero the worst. The higher the score for each question, the better the trust is performing.

It is not appropriate to score all questions in the questionnaire as not all of the questions assess the trusts in any way, for example, they may be 'routing questions' designed to filter out respondents to whom following questions do not apply.

For full details of the scoring please see the technical document (see further information section).

## **Graphs**

The graphs in this report show how the score for the trust compares to the range of scores achieved by all trusts taking part in the survey. The black diamond shows the score for your trust. The graph is divided into three sections:

- If your trust's score lies in the orange section of the graph, its result is 'about the same' as most other trusts in the survey.
- If your trust's score lies in the red section of the graph, its result is 'worse' compared with most other trusts in the survey.
- If your trust's score lies in the green section of the graph, its result is 'better' compared with most other trusts in the survey.

The text to the right of the graph clearly states whether the score for your trust is 'better' or 'worse' compared with most other trusts in the survey. If there is no text the score is 'about the same.' These groupings are based on a rigorous statistical analysis of the data, as described in the following 'methodology' section.

## Methodology

The 'about the same,' 'better' and 'worse' categories are based on a statistic called the '**expected range**' which determines the range within which the trust's score could fall without differing significantly from the average, taking into account the number of respondents for each trust and the scores for all other trusts. If the trust's performance is outside of this range, it means that it performs significantly above/below what would be expected. If it is within this range, we say that its performance is 'about the same'. This means that where a trust is performing 'better' or 'worse' than the majority of other trusts, it is very unlikely to have occurred by chance.

In some cases there will be no red and/or no green area in the graph. This happens when the expected range for your trust is so broad it encompasses either the highest possible score for all trusts (no green section) or the lowest possible for all trusts score (no red section). This could be because there were few respondents and / or a lot of variation in their answers.

Please note that if fewer than 30 respondents have answered a question, no score will be displayed for this question (or the corresponding section). This is because the uncertainty around the result is too great.

A technical document providing more detail about the methodology and the scoring applied to each question is available on the CQC website (see further information section).

## Tables

At the end of the report you will find tables containing the data used to create the graphs, the response rate for your trust and background information about the people that responded.

## Notes on specific questions

**Q10 and Q11:** Q10 (*Do you know how to contact this person if you have a concern about your care?*) and Q11 (*How well does this person organise the care and services you need?*) are not scored if a respondent ticked 'a GP' at Q9. This is because results will not be attributable to the trust.

**Q15:** (*In the last 12 months have you had a formal meeting with someone from NHS mental health services to discuss how your care is working?*) Respondents who stated at Q2 they had been in contact with mental health services for less than a year are not included in the base for this question.

## Further information

The full national results are on the CQC website, together with an A to Z list to view the results for each trust (alongside the technical document outlining the methodology and the scoring applied to each question):
