2 Community Mental Health Survey | 2022 | RH5 | Somerset NHS Foundation Trust

# **Background and methodology**

### This section includes:

- an explanation of the NHS Patient Survey Programme
- information on the Community Mental Health Survey
- a description of key terms used in this report
- navigating the report

NHS Q Care Quality Commission Survey Coordination Centre

### **Background and methodology**

#### The NHS Patient Survey Programme

The NHS Patient Survey Programme (NPSP) collects feedback on adult inpatient care, maternity care, children and young people's inpatient and day services, urgent and emergency care, and community mental health services.

The NPSP is commissioned by the Care Quality Commission (CQC); the independent regulator of health and adult social care in England.

As part of the NPSP, the Community Mental Health Survey has been conducted almost every year since 2004. The CQC use the results from the survey in its assessment of mental health trusts in England.

To find out more about the survey programme and to see the results from previous surveys, please refer to the section on further information on this page.

#### **Community Mental Health Survey**

The survey was administered by the Survey Coordination Centre for Existing Methods (SCCEM) at Picker Institute.

The 2022 survey of people who use community

mental health services involved 53 providers of NHS community mental health services in England. We received responses from 13,418 people, a response rate of 20.9%.

People aged 18 and over were eligible for the survey if they were receiving care or treatment for a mental health condition and were seen face-to-face at the trust, via video conference or telephone between 1 September 2021 and 30 November 2021. For more information on the sampling criteria for the survey, please refer to the sampling instructions detailed in the 'Further information' section. Fieldwork for the survey (the time during which questionnaires were sent out and returned) took place between February and June 2022.

#### Trend data

The Community Mental Health Survey is comparable back to the 2014 survey. Trend data is presented in this report for questions that have been asked in previous survey years.

#### Further information about the survey

CareQuality

Commissior

Centre

### Key terms used in this report

#### The 'expected range' technique

This report shows how your trust scored for each evaluative question in the survey, compared with other trusts that took part. It uses an analysis technique called the 'expected range' to determine if your trust is performing about the same, better or worse compared with most other trusts. This is designed to help understand the performance of individual trusts and identify areas for improvement. More information can be found in the Appendix.

#### Standardisation

Demographic characteristics, such as age and sex, can influence service users' experience of care and the way they report it. For example, research shows that older people report more positive experiences of care than younger people. Since trusts have differing profiles of service users, this could make fair trust comparisons difficult. To account for this, we 'standardise' the results, which means we apply a weight to individual service user responses to account for differences in demographic

profile between trusts. For each trust, results have been standardised by the age and sex of respondents to reflect the 'national' age-sex type distribution (based on all respondents to the survey).

This helps ensure that no trust will appear better or worse than another because of its profile, and enables a fairer and more useful comparison of results across trusts. In most cases this standardisation will not have a large impact on trust results.

#### Scoring

For each question in the survey, the individual (standardised) responses are converted into scores on a scale of 0 to 10. A score of 10 represents the best possible result and a score of 0 the worst. The higher the score for each question, the better the trust is performing. Only evaluative questions in the questionnaire are scored. Some questions are descriptive (for example Q1) and others are 'routing questions', which are designed to filter out

respondents to whom the following questions do not apply (for example Q23). These questions are not scored. Section scoring is computed as the arithmetic mean of question scores for the section after weighting is applied.

#### National average

The 'national average' mentioned in this report is the arithmetic mean of all trusts' scores after weighting is applied.

#### Suppressed data

If fewer than 30 respondents have answered a question, no score will be displayed for that question (or the corresponding section the question contributes to).

#### Further information about the methods

For further information about the statistical methods used in this report, please refer to the survey technical document.

### **Using the survey results**

#### Navigating this report

This report is split into five sections:

- **Background and methodology** provides information about the survey programme, how the survey is run, and how to interpret the data.
- Headline results includes key trust-level findings relating to the service users who took part in the survey, benchmarking, and top and bottom scores. This section provides an overview of results for your trust, identifying areas where your organisation performs better than the average and where you may wish to focus improvement activities.
- **Benchmarking** shows how your trust scored for each evaluative question in the survey, compared with other trusts that took part; using the 'expected range' analysis technique. This allows you to see the range of scores achieved and compare yourself with the other organisations that took part in the survey. Benchmarking can provide you with an indication of where you perform better than the average, and what you should aim for in areas where you may wish to improve.

- Change over time displays your trust score for each survey year. Where available, trend data will be shown from 2014 to 2022. Questions are displayed in a line chart with the trust mean plotted alongside the national average. Statistical significance testing is also shown between survey years 2022 vs 2021. This section highlights areas your trust has improved on or declined in over time.
- Appendix includes additional data for your trust; further information on the survey methodology; and interpretation of graphs in this report.

#### How to interpret the graphs in this report

There are several types of graphs in this report which show how the score for your trust compares to the scores achieved by all trusts that took part in the survey. Additionally, line charts show your trust's trend data over time.

The two chart types used in the section 'Benchmarking' use the 'expected range' technique to show results. For information on how to interpret these graphs, please refer to the <u>Appendix</u>.

#### Other data sources

## Summary of findings for your trust

Benchmarking

#### **Comparison with other trusts**

The **number of questions** at which your trust has performed better, worse, or about the same compared with all other trusts.

#### Comparison with last year's results

The **number of questions** at which your trust has performed statistically significantly better, significantly worse, or no different than your result from the previous year, 2022 vs 2021.

3

# For a breakdown of the questions where your trust has performed better or worse compared with all other trusts, please refer to the appendix section <u>"your trust has performed much worse"</u>, <u>"your trust has performed worse"</u>, <u>"your trust has performed somewhat worse"</u>, <u>"your trust has performed somewhat better"</u>, <u>"your trust has performed better"</u>, <u>"your trust has performed much better"</u>.

9 Community Mental Health Survey | 2022 | RH5 | Somerset NHS Foundation Trust

### Best and worst performance relative to the national average

These five questions are calculated by comparing your trust's results to the national average.

- Top five scores: These are the five results for your trust that are highest compared with the national average. If none of the results for your trust are above the national average, then the results that are closest to the national average have been chosen, meaning a trust's best performance may be worse than the national average.
- Bottom five scores: These are the five results for your trust that are lowest compared with the national average. If none of the results for your trust are below the national average, then the results that are closest to the national average have been chosen, meaning a trust's worst performance may be better than the national average.

This section includes:

- how your trust scored for each evaluative question in the survey, compared with other trusts that took part.
- an analysis technique called the 'expected range' to determine if your trust is performing about the same, better or worse compared with most other trusts.

Survey Coordination Centre

Appendix

### Section 1. Health and social care workers

**Benchmarking** 

This shows the range of section scores for all NHS trusts. The colour of the line denotes whether a trust has performed better, worse, or about the same compared with all other trusts (as detailed in the legend). The result for your trust is shown in black. Please note, as a result of the 'expected range' analysis technique used, a trust could be categorised as 'about the same' whilst having a lower score than a 'worse than expected' trust, or categorised as 'about the same' whilst having a lower score than a 'worse than expected' trust, or categorised as 'about the same' whilst having a higher score than a 'better than expected' trust.

#### Your trust section score = 6.8 About the same

## **Change over time**

### This section includes:

• a comparison to previous survey years scores for your trust for each question, including:

 your trust's 2022 score compared with its scores from 2014 to 2021.

#### Please note;

- Section 3 planning care, appears missing from the change over time section as the questions that comprise the section score are non comparable to previous survey years and therefore do not display trends.
- If data is missing for a survey year, this is due to a low number of responses, or because the trust data was not included in the survey that year, due to sampling errors or ineligibility.

### Somewhat better than expected

# Comparison to other trusts: where your trust has performed somewhat worse

The questions at which your trust has performed somewhat worse when compared with all other trusts are listed below. The questions where your trust has performed about the same compared with all other trusts have not been listed.

#### Somewhat worse than expected

- Q20. Would you know who to contact out of office hours within the NHS if you had a crisis? This should be a person or a team within NHS mental health services.
- Q30. Were you involved as much as you wanted to be in deciding what NHS talking therapies to use?
- Q33. In the last 12 months, did NHS mental health services support you with your physical health needs (this might be an injury, a disability, or a condition such as diabetes, epilepsy, etc)?

## Much worse than expected

# **NHS Community Mental Health Survey**

## **Results for Somerset NHS Foundation Trust**

## Where service user experience is best

- Crisis care (access): time taken to get through to staff
- Care Delivery: staff and service users agreeing how care and treatment will be delivered
- Care Delivery: service users receiving care and treatment in the way agreed
- Medicines review: NHS mental health services checking how service users are getting on with their medicines
- Organisation of care: service users feeling their care is organised well

## Where service user experience could improve

- **Crisis care (access):** service users knowing who to contact out of hours in the NHS if they have a crisis
- **Support and well-being (Financial):** service users being given support with their physical health needs
- **NHS Talking Therapies:** service users being involved in deciding what NHS talking therapies to use
- **Organisation of care:** service users being told who is in charge of organising their care and services
- Views on quality of care: NHS mental health services asking service users for their views on the quality of their care

These questions are calculated by comparing your trust's results to the national average. "Where service user experience is best": These are the five results for your trust that are highest compared with the national average. "Where service user experience could improve": These are the five results for your trust that are lowest compared with the national average.

This survey looked at the experiences of people who were receiving care or treatment for a mental health condition and had been treated by the trust between 1 September 2021 and 30 November 2021. Between February and June 2022, a questionnaire was sent to 1250 recent service users. Responses were received from 306 service users at this trust. If you have any questions about the survey and our results, please contact [INSERT TRUST CONTACT DETAILS].

# How to interpret benchmarking in this report

The charts in the 'benchmarking' section show how the score for your trust compares to the range of scores achieved by all trusts taking part in the survey. The black line shows the score for your trust. The graphs are divided into seven sections, comparing the score for your trust to most other trusts in the survey:

- If your trust's score lies in the **dark green section** of the graph, its result is 'Much better than expected'.
- If your trust's score lies in the **mid-green section** of the graph, its result is 'Better than expected'.
- If your trust's score lies in the **light green section** of the graph, its result is 'Somewhat better than expected'.
- If your trust's score lies in the **grey section** of the graph, its result is 'About the same'.
- If your trust's score lies in the **yellow section** of the graph, its result is 'Somewhat worse than expected'.
- If your trust's score lies in the **light orange** section of the graph, its result is 'Worse than expected'.
- If your trust's score lies in the **dark orange** section of the graph, its result is 'Much worse than expected'.

These groupings are based on a rigorous statistical analysis of the data termed the 'expected range' technique.

Benchmarking

Survey

Centre

# How to interpret benchmarking in this report (continued)

The 'much better than expected,' 'better than expected', 'somewhat better than expected', 'about the same', 'somewhat worse than expected', 'worse than expected' and 'much worse than expected' categories are based on an analysis technique called the 'expected range'. Expected range determines the range within which a trust's score could fall without differing significantly from the average, taking into account the number of respondents for each trust, to indicate whether the trust has performed significantly above or below what would be expected.

If it is within this expected range, we say that the trust's performance is 'about the same' as other trusts. Where a trust is identified as performing 'better' or 'worse' than the majority of other trusts, the result is unlikely to have occurred by chance.

In some cases, there will be no shades of orange and/or green area in the graph. This happens when the expected range for your trust is so broad that it encompasses either the highest possible score for all trusts (no green section) or the lowest possible score for all trusts (no orange section). This could be because there were few respondents and/or a lot of variation in their answers.

In some cases, a trust could be categorised as 'about the same' whilst having a lower score than a 'worse than expected' trust, or categorised as 'about the same' whilst having a higher score than a 'better than expected' trust.

Additional information on the 'expected range' analysis technique can be found in the survey technical report on the NHS Surveys website.

Appendix

Centre

## How to interpret change over time in this report

The charts in the 'change over time' section show how your trust scored in each Community Mental Health survey iteration. Where available, trend data from 2014 to 2022 is shown. If a question only has one data point, this question is not shown. Questions that are not historically comparable, are also not shown.

Each question is displayed in a line chart. These charts show your trust mean score for each survey year (blue line). The national average is also shown across survey years, this is the average score for that question across all community mental health trusts in England (green line). This enables you to see how your trust compares to the national average. If there is data missing for a survey year, this is may be due to either a low number of responses, because the trust was not included in the survey that year, sampling errors or ineligibility.

Statistically significant changes are also displayed in tables underneath the charts, showing significant differences between this year (2022) and the previous year (2021). Z-tests set to 95% significance were used to compare data between the two years (2022 vs 2021). A statistically significant difference means it is unlikely we would have obtained this result if there was no real difference.

CareQuality

Commission

# An example of scoring

Each evaluative question is scored on a scale from 0 to 10. The scores represent the extent to which the service user's experience could be improved. A score of 0 is assigned to all responses that reflect considerable scope for improvement, whereas a score of 10 refers to the most positive service user experience possible. Where a number of options lay between the negative and positive responses, they are placed at equal intervals along the scale. Where options were provided that did not have any bearing on the trust's performance in terms of service user experience, the responses are classified as "not applicable" and a score is not given. Similarly, where respondents stated they could not remember or did not know the answer to a question, a score is not given.

#### Calculating an individual respondent's score

The following provides an example for the scoring system applied for each respondent. For question 7 "Were you given enough time to discuss your needs and treatment?":

- The answer code "Yes, definitely" would be given a score of 10, as this refers to the most positive service user experience possible.
- The answer code "Yes, to some extent" would be given a score of 5, as it is placed at an equal interval along the scale.
- The answer code "No" would be given a score of 0, as this response reflects considerable scope for improvement.

Benchmarking

• The answer code "Don't know / can't remember" would not be scored, as they do not have a clear bearing on the trust's performance in terms of service user's experience.

#### Calculating the trust score for each question

The weighted mean score for each trust, for each question, is calculated by dividing the sum of the weighted scores for a question by the weighted sum of all eligible respondents to the question for each trust. An example of this is provided in the <u>survey technical document</u>.

#### Calculating the section score

An arithmetic mean of each trust's question scores is taken to provide a score for each section.
