2 Community Mental Health Survey | 2024 | NQL | NAVIGO Health and Social Care CIC

# **Background and methodology**

### This section includes:

- an explanation of the NHS Patient Survey Programme
- information on the 2024 Community Mental Health Survey
- a description of key terms used in this report
- navigating the report

Survey Coordination Centre

### **Background and methodology**

### The NHS Patient Survey Programme

The NHS Patient Survey Programme (NPSP) collects feedback on adult inpatient care, maternity care, children and young people's inpatient and day services, urgent and emergency care, and community mental health services.

The NPSP is commissioned by the Care Quality Commission (CQC); the independent regulator of health and adult social care in England.

As part of the NPSP, the Community Mental Health Survey has been conducted almost every year since 2004. CQC use the results from the survey in its assessment of mental health trusts in England.

To find out more about the survey programme and to see the results from previous surveys, please refer to the section on further information on this page.

### **Community Mental Health Survey**

The survey was administered by the Survey Coordination Centre (SCC) at Picker Institute. A total of 76,581 community mental health service users were invited to participate in the survey across 53 NHS trusts.

Completed responses were received from 14,619 community mental health service users, an adjusted\* response rate of 20%.

Service users aged 16 and over were eligible to participate in the survey if they were receiving care or treatment for a mental health condition and were seen face-to-face at the trust, via video conference or telephone between 1 April 2024 and 31 May 2024.

For more information on the sampling criteria for the survey, please refer to the sampling instructions detailed in the 'Further information' section. Fieldwork for the survey (the time during which questionnaires were sent out and returned) took place between August and December 2024.

### Further information about the survey

CareQuality

Commission

- For published results and for more information on the Community Mental Health Survey please visit the <u>NHS Survey website</u>.
- For published results for other surveys in the NPSP, and for information to help trusts implement the surveys across the NPSP, please visit the <u>NHS Surveys website</u>.
- To learn more about the CQC's survey programme, please visit the <u>CQC website</u>.

\*The adjusted base is calculated by subtracting the number of questionnaires returned as undeliverable, or if someone had died, from the total number of questionnaires sent out. The adjusted response rate is then calculated by dividing the number of returned useable questionnaires by the adjusted base.

### Key terms used in this report

#### The 'expected range' technique

This report shows how your trust scored for each evaluative question in the survey, compared with other trusts that took part. It uses an analysis technique called the 'expected range' to determine if your trust is performing about the same, better or worse compared with most other trusts. This is designed to help understand the performance of individual trusts and identify areas for improvement. More information can be found in the <u>How to</u> <u>interpret benchmarking in this report</u> slide.

#### **Standardisation**

Demographic characteristics, such as age and sex, can influence care experiences and how they are reported. For example, research shows that older people report more positive experiences of care than younger people. Since trusts have differing profiles of community mental health service users, this could make fair trust comparisons difficult. To account for this, we 'standardise' the results, which means we apply a weight to individual service user responses to account for differences in demographic profile between trusts. For each trust, results have been standardised by the age and sex of respondents to reflect the 'national' age-sex type distribution (based on all respondents to the survey).

This helps ensure that no trust will appear better or worse than another because of its profile and enables a fairer and more useful comparison of results across trusts. In most cases this standardisation will not have a large impact on trust results.

#### Scoring

For selected questions in the survey, the individual (standardised) responses are converted into scores, typically 0, 5, or 10 (except for Q15). A score of 10 represents the best possible result and a score of 0 the worst. The higher the score for each question, the better the trust is performing. Only evaluative questions in the questionnaire are scored. Some questions are descriptive (for example Q1), and others are 'routing questions', which are designed to filter out respondents to whom subsequent questions are not scored. Please refer to the scored questionnaire for further details. Section scoring is computed as

the arithmetic mean of question scores for the section after weighting is applied. More information can be found in the '<u>An example of scoring</u>' slide.

CareQuality

Commission

#### National average

The 'national average' mentioned in this report is the arithmetic mean of all trusts' scores after weighting is applied.

#### Suppressed data

If fewer than 30 respondents have answered a question, no score will be displayed for that question (or the corresponding section the question contributes to).

## Further information about the methods

For further information about the statistical methods used in this report, please refer to the <u>survey</u> <u>technical document</u> which is on the 'Analysis and Reporting' section of the 2024 Community Mental Health Survey webpage on the NHS surveys website.

### Using the survey results

#### Navigating this report

This report is split into five sections:

- Background and methodology provides information about the survey programme, how the survey is run, and how to interpret the data.
- Headline results includes key trust-level findings relating to the service users who took part in the survey, benchmarking, and top and bottom scores. This section provides an overview of results for your trust, identifying areas where your organisation performs better than the average and where you may wish to focus improvement activities.
- **Benchmarking** shows how your trust scored for each evaluative question in the survey, compared with other trusts that took part; using the 'expected range' analysis technique. This allows you to see the range of scores achieved and compare yourself with the other organisations that took part in the survey. Benchmarking can provide you with an indication of where you perform better than the average, and what you should aim for in areas where you may wish to improve.

- Change over time includes your trust's mean score for each evaluative question in the survey shown in a significance test table, comparing it to your 2023 mean score. This allows you to see if your trust has made statistically significant improvements between survey years.
- Comparison to other trusts includes where your trust has performed better or worse in comparison to other trusts.

## How to interpret the graphs in this report

There are several types of graphs in this report that show how the score for your trust compares to the scores achieved by all trusts that took part in the survey.

The two chart types used in the section 'Benchmarking' use the 'expected range' technique to show results. For information on how to interpret these graphs, please refer to the <u>'How to interpret</u> <u>benchmarking in this report</u>' slides.

#### Other data sources

More information is available about the following topics at their respective websites, listed below:

mmissior

## Summary of findings for your trust

Scoring and

#### **Comparison with other trusts**

The number of questions at which your trust has performed better, worse, or about the same compared with all other trusts.

### Comparison with last year's results

The **number of questions** at which your trust has performed statistically significantly better, significantly worse, or no different than your result from the previous year, 2024 vs 2023.

For a breakdown of the questions where your trust has performed better or worse compared with all other trusts, please refer to the section "Comparison to other trusts".

Change over time

ne Comparison to other trusts

CareQuality

Commissioñ

### Best and worst performance relative to the national average

These five questions are calculated by comparing your trust's results to the national average.

- Top five scores: These are the five results for your trust that are highest compared with the national average. If none of the results for your trust are above the national average, then the results that are closest to the national average have been chosen, meaning a trust's best performance may be worse than the national average.
- Bottom five scores: These are the five results for your trust that are lowest compared with the national average. If none of the results for your trust are below the national average, then the results that are closest to the national average have been chosen, meaning a trust's worst performance may be better than the national average.

## **NHS Community Mental Health Survey**

### **Results for NAVIGO Health and Social Care CIC**

### Where service user experience is best

- ✓ Support while waiting: service users offered support while waiting
- Support with other areas of life: service users being given support with physical health needs
- Crisis care support: NHS mental health team provided support to family/carer when service users had a crisis
- Crisis care support: service users getting help needed when they last contacted the crisis team
- Planning care: service users had a care review meeting in the last 12 months

### Where service user experience could improve

• Medication: benefits of medication being discussed with service users

CareQuality

- o Involvement in care: service users feeling in control of their care
- Medication: side effects of medication being discussed with service users
- **Respect, dignity and compassion:** service users being treated with respect and dignity by NHS mental health services
- **Support with other areas of life:** service users being given help or advice with finding support for finding or keeping work

These questions are calculated by comparing your trust's results to the national average. "Where service user experience is best": These are the five results for your trust that are highest compared with the national average. "Where service user experience could improve": These are the five results for your trust that are lowest compared with the national average.

This survey looked at the experiences of people who were receiving care or treatment for a mental health condition and had been treated by the trust between 1 April 2024 and 31 May 2024. Between August and December 2024, a questionnaire was sent to 1250 recent service users. Responses were received from 244 service users at this trust. If you have any questions about the survey and our results, please contact [INSERT TRUST CONTACT DETAILS].

11 Community Mental Health Survey | 2024 | | NQL | NAVIGO Health and Social Care CIC

# **Scoring and benchmarking**

### This section includes:

- how your trust scored for each evaluative question in the survey, compared with other trusts that took part
- an analysis technique called the 'expected range' to determine if your trust is performing about the same, better or worse compared with most other trusts

**Please note**: If data is missing, this is due to a low number of responses.

12 Community Mental Health Survey | 2024 | NQL | NAVIGO Health and Social Care CIC

Survey Coordination Centre

### How questions are scored

Headline results

Each evaluative question is scored on a scale from 0 to 10. The scores represent the extent to which the service user's experience could be improved. A score of 0 is assigned to all responses that reflect considerable scope for improvement, whereas a score of 10 refers to the most positive service user experience possible. Where a number of options lay between the negative and positive responses, they are placed at equal intervals along the scale. Where options were provided that did not have any bearing on the trust's performance in terms of service user experience, the responses are classified as "not applicable" and a score is not given. Similarly, where respondents stated they could not remember or did not know the answer to a question, a score is not given.

#### Example of how questions are scored

The following provides an example for the scoring system applied for each respondent. For question 18 "Has your NHS mental health team supported you to make decisions about your care and treatment? Support includes sharing information on risks and benefits of your care and treatment.":

- The answer code "Yes, definitely" would be given a score of 10, as this refers to the most positive service user experience possible.
- The answer code "Yes, to some extent" would be given a score of 5, as it is placed at an equal interval along the scale.
- The answer code "No" would be given a score of 0, as this response reflects considerable scope for improvement.
- The answer code "Don't know / can't remember" would not be scored, as they do not have a clear bearing on the trust's performance in terms of service user's experience.

#### Calculating the trust score for each question

The weighted mean score for each trust, for each question, is calculated by dividing the sum of the weighted scores for a question by the weighted sum of all eligible respondents to the question for each trust. An example of this is provided in the <u>survey technical document</u>.

#### Calculating the section score

An arithmetic mean of each trust's question scores is taken to provide a score for each section.

Comparison to other trusts

CareQuality

Commissioñ

### How to interpret benchmarking in this report

The charts in the 'benchmarking' section show how the score for your trust compares to the range of scores achieved by all trusts taking part in the survey. The black line shows the score for your trust. The graphs are divided into seven sections, comparing the score for your trust to most other trusts in the survey:

- If your trust's score lies in the dark green section of the graph, its result is 'Much better than expected'.
- If your trust's score lies in the **mid-green section** of the graph, its result is 'Better than expected'.
- If your trust's score lies in the **light green section** of the graph, its result is 'Somewhat better than expected'.
- If your trust's score lies in the **grey section** of the graph, its result is 'About the same'.
- If your trust's score lies in the **yellow section** of the graph, its result is 'Somewhat worse than expected'.
- If your trust's score lies in the **light orange section** of the graph, its result is 'Worse than expected'.
- If your trust's score lies in the **dark orange section** of the graph, its result is 'Much worse than expected'.

These groupings are based on a rigorous statistical analysis of the data termed the '<u>expected range' technique</u>.

Survey

### How to interpret benchmarking in this report (continued)

The 'much better than expected,' 'better than expected', 'somewhat better than expected', 'about the same', 'somewhat worse than expected', 'worse than expected' and 'much worse than expected' categories are based on an analysis technique called the 'expected range'. Expected range determines the range within which a trust's score could fall without differing significantly from the average, taking into account the number of respondents for each trust, to indicate whether the trust has performed significantly above or below what would be expected.

If it is within this expected range, we say that the trust's performance is 'about the same' as other trusts. Where a trust is identified as performing 'better' or 'worse' than the majority of other trusts, the result is unlikely to have occurred by chance.

The question score charts show the trust scores compared to the minimum and maximum scores achieved by any trust. In some cases, this minimum or maximum limit will mean that one or more of the bands are not visible - because the range of other bands is broad enough to include the highest or lowest score achieved by a trust this year. This could be because there were few respondents, meaning the confidence intervals around your data are slightly larger, or because there was limited variation between trusts for this question this year.

In some cases, a trust could be categorised as 'about the same' whilst having a lower score than a 'worse than expected' trust, or categorised as 'about the same' whilst having a higher score than a 'better than expected' trust. This occurs as the bandings are calculated through standard error rather than standard deviation. Standard error takes into account the number of responses achieved by a trust, and therefore the banding may differ for a trust with a low number of responses.

Additional information on the 'expected range' analysis technique can be found in the survey technical report on the NHS Surveys website.

Change over time

### Section 1. Support while waiting

This shows the range of section scores for all NHS trusts. The colour of the line denotes whether a trust has performed better, worse, or about the same compared with all other trusts (as detailed in the legend). The result for your trust is shown in black. Please note, as a result of the 'expected range' analysis technique used, a trust could be categorised as 'about the same' whilst having a lower score than a 'worse than expected' trust, or categorised as 'about the same' whilst having a lower score than a 'worse than expected' trust, or categorised as 'about the same' whilst having a higher score than a 'better than expected' trust.

#### Your trust section score = 7.9 Much better than expected

Care Quality Commission

8.1

8.6

### Section 1. Support while waiting (continued)

### **Section 2. Mental Health Team**

This shows the range of section scores for all NHS trusts. The colour of the line denotes whether a trust has performed better, worse, or about the same compared with all other trusts (as detailed in the legend). The result for your trust is shown in black. Please note, as a result of the 'expected range' analysis technique used, a trust could be categorised as 'about the same' whilst having a lower score than a 'worse than expected' trust, or categorised as 'about the same' whilst having a lower score than a 'worse than expected' trust, or categorised as 'about the same' whilst having a higher score than a 'better than expected' trust.

#### Your trust section score = 6.7 Somewhat better than expected

Care Quality Commission

### **Section 3. Planning care**

This shows the range of section scores for all NHS trusts. The colour of the line denotes whether a trust has performed better, worse, or about the same compared with all other trusts (as detailed in the legend). The result for your trust is shown in black. Please note, as a result of the 'expected range' analysis technique used, a trust could be categorised as 'about the same' whilst having a lower score than a 'worse than expected' trust, or categorised as 'about the same' whilst having a lower score than a 'worse than expected' trust, or categorised as 'about the same' whilst having a higher score than a 'better than expected' trust.

#### Your trust section score = 6.8 Somewhat better than expected

### NHS

### **Section 7. Crisis Care Support**

This shows the range of section scores for all NHS trusts. The colour of the line denotes whether a trust has performed better, worse, or about the same compared with all other trusts (as detailed in the legend). The result for your trust is shown in black. Please note, as a result of the 'expected range' analysis technique used, a trust could be categorised as 'about the same' whilst having a lower score than a 'worse than expected' trust, or categorised as 'about the same' whilst having a lower score than a 'worse than expected' trust, or categorised as 'about the same' whilst having a higher score than a 'better than expected' trust.

#### Your trust section score = 6.3 Better than expected

Comparison to

# Section 10. Support in accessing care

This shows the range of section scores for all NHS trusts. The colour of the line denotes whether a trust has performed better, worse, or about the same compared with all other trusts (as detailed in the legend). The result for your trust is shown in black. Please note, as a result of the 'expected range' analysis technique used, a trust could be categorised as 'about the same' whilst having a lower score than a 'worse than expected' trust, or categorised as 'about the same' whilst having a lower score than a 'worse than expected' trust, or categorised as 'about the same' whilst having a higher score than a 'better than expected' trust.

#### Your trust section score = 5.7 Somewhat better than expected

Q41. Aside from this questionnaire, in the last 12 months, have you been asked by NHS mental health services to give your views on the quality of your care?

# **Change over time**

#### This section includes:

- your mean trust score for each evaluative question in the survey
- where comparable data is available, statistical significance testing using a two-sample t-test has been carried out against the 2023 and 2024 survey results for each relevant question. Where a change in results is shown as 'significant', this indicates that this change is not due to random chance, but is likely due to some particular factor at your trust

#### Please note:

- If data is missing for a survey year, this is due to a low number of responses, or because the trust data was not included in the survey that year, due to sampling errors or ineligibility.
- The following questions were new or changed for 2024 and therefore are not included in this section: Q9, Q15, Q16, Q26, Q37.
- Section 6 has been excluded as the question that constitutes the section has been amended and is no longer comparable.
- A <u>two-sample t-test</u> is a statistical test used to compare the means of two groups to see if there is a significant difference between them and assess whether observed differences are likely due to chance or not

Survey Coordination Centre

45 Community Mental Health Survey | 2024 | NQL | NAVIGO Health and Social Care CIC

# How to interpret change over time in this report

The charts in the 'change over time' section show how your trust scored in each Community Mental Health survey iteration. Where available, trend data from 2023 to 2024 is shown. If a question only has one data point, this question is not shown. Questions that are not historically comparable, are also not shown.

Each question is displayed in a line chart. These charts show your trust mean score for each survey year (blue line). The national average is also shown across survey years, this is the average score for that question across all community mental health NHS trusts in England (green line). This enables you to see how your trust compares to the national average. If there is data missing for a survey year, this may be due to either a low number of responses, because the trust was not included in the survey that year, sampling errors or ineligibility.

Statistically significant changes are also displayed in the table underneath the charts, showing significant differences between this year (2024) and the previous year (2023). Z-tests set to 95% significance were used to compare data between the two years (2024 vs 2023). A statistically significant difference means it is unlikely we would have obtained this result if there was no real difference.

# Section 1. Support while waiting

Significant change 2024 vs 2023

No change

Answered by those who have been in contact with the NHS mental health services for the past 2 years. Respondents who stated that they didn't know or couldn't remember have been excluded. Number of respondents: 2023: 93; 2024: 105

#### Significant change 2024 vs 2023

No change

Answered by those who have been in contact with the NHS mental health services for the past 2 years and were offered support while waiting for treatment. Respondents who stated that they didn't know or couldn't remember or that they did not need any support have been excluded. Number of respondents: 2023: 66; 2024: 85

## **Section 2. Mental Health Team**
